Adhoc environments

Reproducible environments

# DEMO

### NIX LANGUAGE

#### **Derivation**

```
"/nix/store/dvmidxj5...-myProject-1.0.0.drv": {
  "inputSrcs": [
    "/nix/store/9krlzvn...-default-builder.sh"
  "inputDrvs": {
    "/nix/store/1psqjc0l1..-bash-4.4-p23.drv": [
      "out"
    "/nix/store/8fbvqyxl9y...-myProject-1.0.0.tar.gz.drv": [
      "out"
    ],
    "/nix/store/m15naxf2...-stdenv-linux.drv": [
    . . .
```

### NIX LANGUAGE

#### ≈Json + Functions

```
mkDerivation {
  name = "myProject-1.0.0";
  src = ./src;
  buildInputs = [ python311 poetry ...];
}
```

#### **Benefits**

- Functional
- Pure (almost)
- Declarative

### NIX LANGUAGE

- Numbers 42
- Strings "hello"
- List [1 2 3]
- Expressions 1+2+3
- Attribute Sets { key = value; ... }
- Let Bindings **let** x = ... in ...
- Functions f x

### ATTRIBUTE SET

```
name = "myProject-1.0.0";
src = ./src;
buildInputs = [ python311 poetry ...];
...
}
```

```
myNumber = 3;
myAttrSet = { name = "myProject-1.0.0"; src = ... };
myString = otherAttrSet.nestedSet.name;
myFunction = x: 2*x;
}
```

### LET-BINDING

#### Factor out common expression:

```
{
  name = otherAttrSet.a.b.c;
  src = otherAttrSet.a.b.d;
  ...
}
```

```
let common = otherAttrSet.a.b;
in
{
   name = common.c;
   src = common.d;
   ...
}
```

#### **Typescript**

#### Nix

```
const f = x => 2x
f(3)
```

```
f = x: 2*x # definition
f 3 # usage
```

#### **Typescript**

#### Nix

```
const g = (x,y) => x+y g(3,4)
```

```
g = x: y: x+y
g 3 4
```

#### Currying

```
\begin{array}{lll} g\colon \ (\mathbb{R},\mathbb{R}) \to \mathbb{R} & g\colon \mathbb{R} \to (\mathbb{R} \to \mathbb{R}) \\ g\colon \ (x,y) \mapsto x+y & g\colon x \mapsto (y \mapsto x+y) \end{array}
```

#### **Usage**

```
# Definition
mkDerivation = overrideAttrs: ...

# Usage
mkDerivation {
  name = "myProject-1.0.0";
  src = ./src;
}
```

#### **Resulting Derivation**

```
{
  "/nix/store/dvmidxj5...-myProject-1.0.0.drv": {
    "inputSrcs": [
        "/nix/store/9krlzvn...-default-builder.sh"
    ],
    ...
```

### DERIVATION

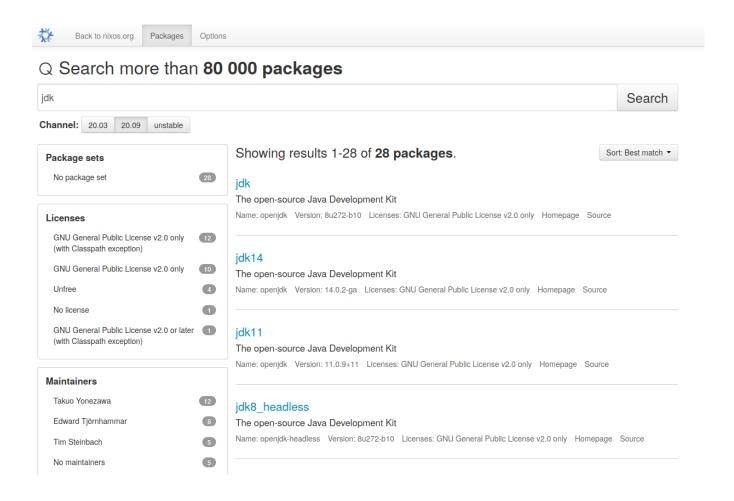

```
let
  pkgs = ...
in
pkgs.stdenv.mkDerivation {
  name = "myProject-1.0.0";
  src = ./src;
  buildInputs = [ pkgs.python311 pkgs.poetry ];
  buildPhase = "poetry build";
}
```

### **NIXPKGS**

#### Just a huge attribute set:

```
\# pkgs =
  stdenv = { mkDerivation = .. ; ... }
  . . .
  poetry = stdenv.mkDerivation {... python311 ...}
  python39 = ...
  python311 = ...
  git = ....
  firefox = ...
```

### SEARCH PACKAGES

https://search.nixos.org

### REPRODUCIBLE BUILDS

```
$ nix build <derivation> # build artifact, put into store
```

#### Store

```
/nix/store/9234jfkdfj23j45r2102jfd-myProject-1.0.0
/nix/store/34234sdfjskdfj32j4kjdsf-python311-3.11.0
..
/nix/store/fsdkf234jdfdsfjkj0111df-poetry-1.6.1
/nix/store/sdf34dfkjlkj09u123123ss-poetry-1.6.1
..
```

\$ nix develop flake.nix # load environment with buildInputs

# DEMO

### NIXOS

```
boot.kernelPackages = pkgs.linuxPackages 6 5;
users.users.mneuss = { home = "/home/mneuss"; ...};
environment.systemPackages = with pkgs; [
  jetbrains.idea-ultimate
  python311
services.xserver.desktopManager.gnome3.enable = true;
networking.firewall.allowedTCPPorts = [ 80 ];
```

```
nixos-rebuild switch ...
```
